

Biometric security made smart & simple.

Transforming how people enter and secure buildings.

Understanding that no two spaces have identical security needs, BioConnect offers an adaptable platform that infuses intelligence into physical security. This biometric-centered security platform provides smart, secure and frictionless access control.

What's Included?

Get AI-Powered Biometric Readers, Software and Expert Support - all in one convenient subscription.

- ✓ Authentication Platform
- ✓ AI-Powered Biometrics
- ✓ IT & Security Expertise

IT Certified SOC 2, Type II

Data security is our top priority. Regularly audited to ensure security, availability, integrity, confidentiality and privacy.

'No Enrollment' Feature

Profile photos from HR/Active Directory Systems can be used to generate a biometric enrollment for each user.

Privacy & Compliance

Biometric data stored on the user's device ensures adherence to security and compliance regulations.

Don't compromise on security. Upgrade to BioConnect.

INTRODUCING...

'No Enrollment'

Revolutionizing access control with automatic biometric enrollment through synchronization of existing profile photos from HR or Active Directory Systems. Making enrollment as simple as a single click, for your entire user base. No Enrollment ensures seamless onboarding, enhanced security, and compliance with privacy laws. Security, seamlessly integrated.

Efficiency in Onboarding

Enrolling employees one by one for access control can be a real bottleneck—time-consuming and error-prone. Save immense amounts of time, and in turn, money by removing the need for person-by-person, manual enrollment.

Heightened Security

Utilize pre-approved credentials to significantly reduce the threat of unauthorized access and related security challenges.

Integration with Current Systems

Our solution fits neatly within existing organizational systems, enabling immediate and seamless integration and onboarding without disruption.

Biometric Privacy & Compliance

Utilizing current profile photos to create biometric enrollments ensures compliance with biometric privacy regulations like BIPA, CCPA, and GDPR.
